

Dear John,

I thought you might like the enclosed, taken by a lad who works for me & lent me the neg.

Christmas was hectic - what with the MEX and rickens. The MEX was very successful and sales are going well, now have an autorotation unit nearly in production, it works better than I thought.

Big news is a secret please - after the Agustin there will be an M.A.D. (Monkey Aerobatic Device) The performance is staggering, can't wait to get the production problems sorted. Any news on the three bladed head, or on the chinook?

Please excuse the short note - still seem to have lots to do,

John
